The I/O model by Aggarwal and Vitter '87

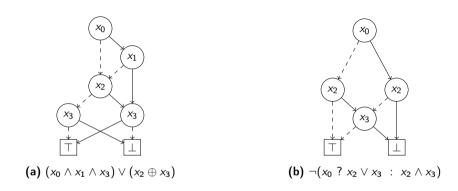

For any realistic values of N, M, and B we have that

$$N/B < \operatorname{sort}(N) \triangleq N/B \cdot \log_{M/B} N/B \ll N$$
,

Theorem (Aggarwal and Vitter '87) N elements can be sorted in $\Theta(sort(N))$ I/Os.

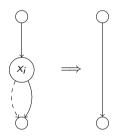

Theorem (Arge '95)

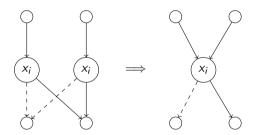

N elements can be inserted in and extracted from a Priority Queue in $\Theta(sort(N))$ I/Os.

Examples of (Reduced Ordered) Binary Decision Diagrams.

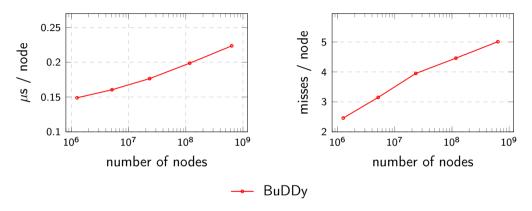

Theorem (Bryant '86)For a fixed variable order, if one exhaustively applies the two rules below, then one obtains the Reduced OBDD, which is a unique canonical form of the function.
